Web Content Extractor Crack+ (April-2022)

Simple-to-handle utility The installation process is a piece of cake, while the interface you come across is quite well-organized and minimal. It consists of a menu bar, a few buttons and some panes which enable you to view various information. Moreover, well-written Help contents are incorporated, thus ensuring that all types of users can find their way around it without posing any kind of issues. Create new projects and save them This tool enables you to easily create new projects with the help of a wizard, so that you can easily start extracting the information that interests you, while you can also save them to a custom location on the hard drive using a WCEPR format. Information you can insert It is possible to specify the starting URLs, use and test an automatic submit script, add crawling levels, follow links if they contain a specific keyword, follow all internal links, scroll down page and extract URL from on-click events. Aside from that, you can easily select the metadata (page URL, title, current time and date, starting URL) and data fields that you want to extract and choose where to save project. Start the process and export data The extraction process can be started, paused and stopped with the help of the incorporated buttons, while it is also possible to search for an item, export all extracted information to a TXT, CSV, MDB, HTML, XML or an SQL script file. As a starting off point, Web Content Extractor may not exactly be the ideal program to extract all data from one URL. But, if you're searching for a way to extract a certain amount of data from multiple URLs, it's definitely a one-stop solution to choose from. This is a tool that can be considered one of the most easy-to-use options out there on the market. In fact, it's not all that advanced, as it can be found as simple as a Google search. Besides being a fairly basic tool, it can also be considered one of the most stable solutions available for web data extraction. Some of the highlighted features are: - Web Content Extractor is able to extract all text data - Create new projects and save them - It is possible to specify the starting URLs, use and test an automatic submit script, add crawling levels, follow links if they contain a specific keyword, follow all internal links, scroll down page and extract URL from on-click events - It is
